Harbor Ember

Sherwin-Williams guidance for this RTA cabinet finish

How to order this finish

1. Choose the right location: a Sherwin-Williams retail store for trim and smaller items (latex-based paint, one-gallon minimum on custom mixes), or a Product Finishes Facility for doors, panels, and larger pieces (recommended — bring an actual door or drawer for matching).
2. Tell the associate this finish is listed in Sherwin-Williams' National Account Database.
3. The associate looks it up in the SOURCE browser under Marketing > National Accounts > Account Profiles – New, searching “BGI” as the customer name.
4. Once the profile is found, give the associate the code shown below.

Sherwin-Williams match code

SHERWIN-WILLIAMS NATIONAL ACCOUNT STAIN CODE

BGI-HE

Note

This is a vendor lookup code, not a guarantee of an exact stain match. Stain appearance changes with the wood and application.

Test before completing the project. This code is a manufacturer-supplied reference for the Sherwin-Williams National Account program. Cabinet finishes and field-applied paint can vary because of aging, lighting, sheen, cabinet production lot, and application method. Whenever possible, bring an actual cabinet door or drawer front to Sherwin-Williams for the best match. Apply a small sample, allow it to dry completely, and approve the result before painting the full piece. An exact match is not guaranteed.
